

ETI

POLLUTION PREVENTION AND LEAN PRINCIPLES TRAINING

Over the past two years workshop attendees have reported savings of \$ 1.2 million, with reductions of over 3 million pounds of pollution.

**"All waste is a hazardous waste, it's a hazard to our bottom line."
- George Freida, Quantum Chemicals**

This workshop will use some of the most trusted methods for analyzing productivity to reduce your environmental impact. By taking this approach, we will show you how to turn any environmental liability into an asset, and identify hidden wastes.

Whether you have a dumpster full of paper, or a smoke stack with a million dollars of pollution control equipment, this workshop can help you identify opportunities. This training has been utilized by manufacturing operations, fleet management, military, municipal, hospital, and university operations. Participants include full time Environmental Health and Safety Professionals and people who "wear multiple hats" (or maybe just got an environmental hat added).

By making minor changes to their work, eliminating excess materials, finding markets for existing materials and changing to less toxic chemicals, companies lower their risk and help the environment. Bottom-line savings prove it's the right business choice. Over the past two years workshop attendees have reported savings of \$1.2 million, with reductions of over 3 million pounds of waste. Find out how you can make more money while doing the right thing for your community and lowering your risks.
